16. Software Management

Lab Tasks & Linux Command Reference Guide (Ubuntu / Debian)

Task 1: Install VLC Media Player and Verify Installation

Use the apt package manager to install VLC media player on your Linux system, then verify the installation by running vlc --version in the terminal.

```
# Install VLC
sudo apt update
sudo apt install -y vlc
```

```
# Verify Installation
vlc --version
```

Task 2: Update All Installed Packages

Update all installed packages on your Linux system using the appropriate package manager command, and take a screenshot of the output showing at least one package being upgraded.

```
# Update package lists and upgrade system packages
sudo apt update
sudo apt upgrade -y
```

Task 3: Remove Nano Text Editor

Remove the nano text editor from your system using the package manager, then confirm it has been removed by attempting to run nano in the terminal.

```
# Uninstall nano
sudo apt remove -y nano
```

```
# Confirm removal (Output should return 'command not found')
nano
```

Task 4: List Installed Packages Related to 'Python'

List all installed packages on your system and filter the results to show only packages related to 'python' using grep.

```
# Method 1: Using dpkg (Standard Debian/Ubuntu)
dpkg -l | grep python
```

```
# Method 2: Using apt
apt list --installed | grep python
```

Task 5: Clean Up Unused Packages and Dependencies

Clean up unused packages and dependencies on your Linux system using the autoremove and clean commands.

```
# Remove orphaned dependencies and clear package cache
sudo apt autoremove --purge -y
sudo apt clean
```
